

Hello, Turing!

today we will discuss:

Setup, Git, Tooling

Speakers:

@Aidar Nugmanov

Requirements

- *nix-based OS
- Basic computer literacy

Environment is the key

Shell

wiki: In a Linux system, the *shell* is a command-line interface that interprets a user's commands and script files, and tells the server's operating system what to do with them

Types of shells

ksh

csh

zsh

bash

sh

Basic shell commands

Linux Bash Shell Cheat Sheet

Basic Commands

Basic Terminal Shortcuts

CTRL L = Clear the terminal
CTRL D = Logout
SHIFT Page Up/Down = Go up/down the terminal
CTRL A = Cursor to start of line
CTRL E = Cursor the end of line
CTRL U = Delete left of the cursor
CTRL K = Delete right of the cursor
CTRL W = Delete word on the left
CTRL Y = Paste (after CTRL U,K or W)
TAB = auto completion of file or command
CTRL R = reverse search history
!! = repeat last command
CTRL Z = stops the current command (resume with fg in foreground or bg in background)

Basic Terminal Navigation

ls -a = list all files and folders
ls <folderName> = list files in folder
ls -lh = Detailed list, Human readable
ls -l *.jpg = list jpeg files only
ls -lh <fileName> = Result for file only

cd <folderName> = change directory
 if folder name has spaces use " "
cd / = go to root
cd .. = go up one folder, tip: ../../..

du -h: Disk usage of folders, human readable
du -ah: " " " files & folders, Human readable
du -sh: only show disc usage of folders

pwd = print working directory

man <command> = shows manual (RTFM)

Basic file manipulation

cat <fileName> = show content of file
 (less, more)
head = from the top
 -n <#oflines> <fileName>

tail = from the bottom
 -n <#oflines> <fileName>

mkdir = create new folder
mkdir myStuff ..
mkdir myStuff/pictures/ ..

cp image.jpg newimage.jpg = copy and rename a file
cp image.jpg <folderName>/ = copy to folder
cp image.jpg folder/sameImageNewName.jpg
cp -R stuff otherStuff = copy and rename a folder
cp *.txt stuff/ = copy all of *<file type> to folder

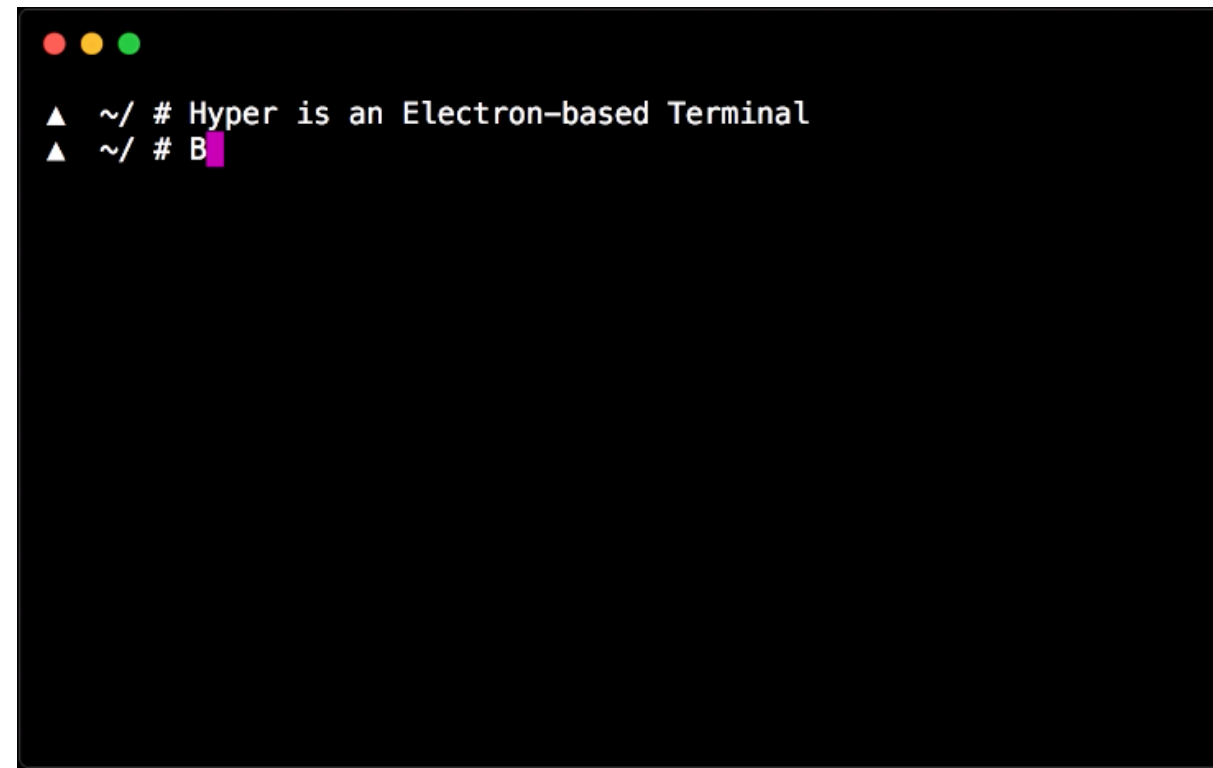

mv file.txt Documents/ = move file to a folder
mv <folderName> <folderName2> = move folder in folder
mv filename.txt filename2.txt = rename file
mv <fileName> stuff/newfileName
mv <folderName>/ .. = move folder up in hierarchy

rm <fileName> .. = delete file (s)
rm -i <fileName> .. = ask for confirmation each file
rm -f <fileName> = force deletion of a file
rm -r <foldername>/ = delete folder

touch <fileName> = create or update a file

ln file1 file2 = physical link
ln -s file1 file2 = symbolic link

Terminal

```
▲ ~/ # Hyper is an Electron-based Terminal
▲ ~/ # B
```

wiki: A terminal emulator is a program that allows the use of the terminal in a graphical environment.

Types of terminals

Mac OS

iTerm 2

Terminal

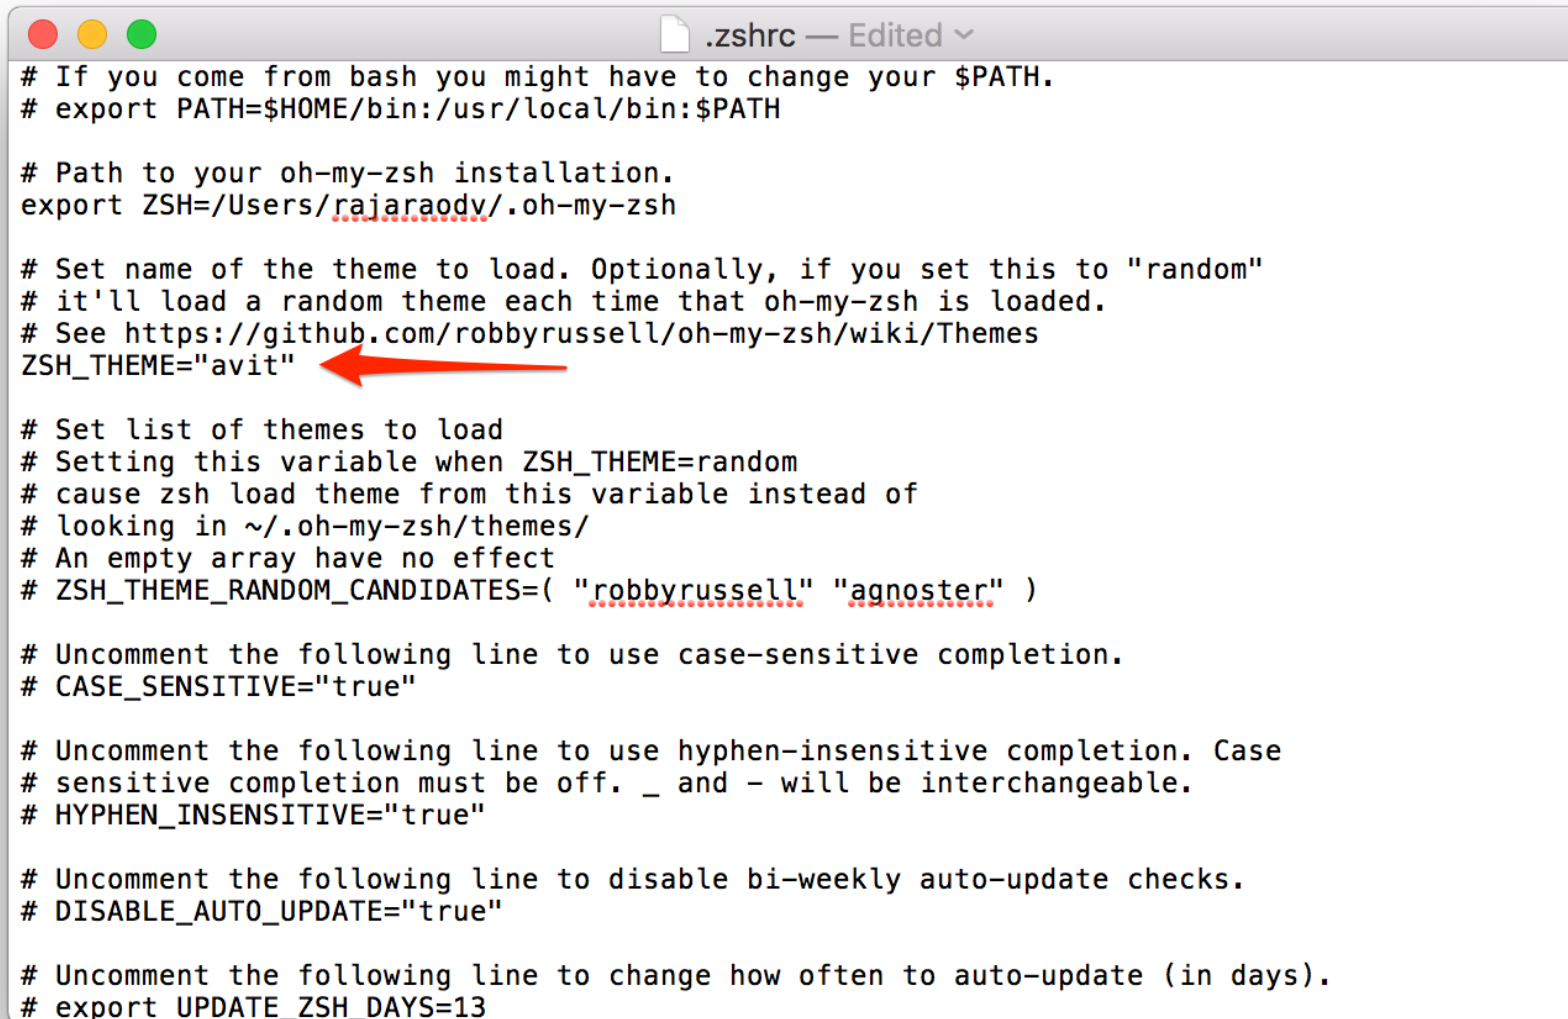

Linux

Guake

Terminator

```
# If you come from bash you might have to change your $PATH.
# export PATH=$HOME/bin:/usr/local/bin:$PATH

# Path to your oh-my-zsh installation.
export ZSH=/Users/rajarao.v/.oh-my-zsh

# Set name of the theme to load. Optionally, if you set this to "random"
# it'll load a random theme each time that oh-my-zsh is loaded.
# See https://github.com/robbyrussell/oh-my-zsh/wiki/Themes
ZSH_THEME="avit"

# Set list of themes to load
# Setting this variable when ZSH_THEME=random
# cause zsh load theme from this variable instead of
# looking in ~/.oh-my-zsh/themes/
# An empty array have no effect
# ZSH_THEME_RANDOM_CANDIDATES=( "robbyrussell" "agnoster" )

# Uncomment the following line to use case-sensitive completion.
# CASE_SENSITIVE="true"

# Uncomment the following line to use hyphen-insensitive completion. Case
# sensitive completion must be off. _ and - will be interchangeable.
# HYPHEN_INSENSITIVE="true"

# Uncomment the following line to disable bi-weekly auto-update checks.
# DISABLE_AUTO_UPDATE="true"

# Uncomment the following line to change how often to auto-update (in days).
# export UPDATE_ZSH_DAYS=13
```

1. kevin@100002277: ~/test (zsh)

Last login: Thu Jan 12 14:41:11 on ttys001

~ ➤ nocmd

zsh: command not found: nocmd

✗ ~ ➤ mkdir test

~ ➤ cd test

~/test ➤ git init

Initialized empty Git repository in /Users/kevin/test/.git/

~/test ➤ ↗ master ➤ touch .dirty

~/test ➤ ↗ master ➤ git checkout -b feature/doink

Switched to a new branch 'feature/doink'

~/test ➤ ↗ feature/doink ➤ git checkout -b feature/doink

Dotfiles

wiki: In UNIX file systems, *dotfiles* are text-based configurations files that stores settings of almost every application, service and tool running on your system.

Editors/IDEs

A ***text editor*** is just for writing/modifying text/code

VS.

With an ***IDE***, you should do a lot more within that single program:
running, debugging, version control, etc.

Vim

Emacs

Atom

Sublime Text

JetBrains products

VSCode

Eclipse

NetBeans

Package managers

Homebrew

Ruby Gems

NPM

wiki: A *package manager* is a collection of software tools that automates the process of installing, upgrading, configuring, and removing computer programs for a computer's operating system in a consistent manner.

Tooling Recap

Before you start coding

(Information, Opinion, Guidelines)

Draw on paper	Reuse and open source components	Easy parallelism	XML	Declarative drawing

Approaching all aspects of life "**the open source way**" means expressing a willingness to share, collaborating with others in ways that are transparent (so that others can watch and join too), embracing failure as a means of improving, and expecting—even encouraging—everyone else to do the same.

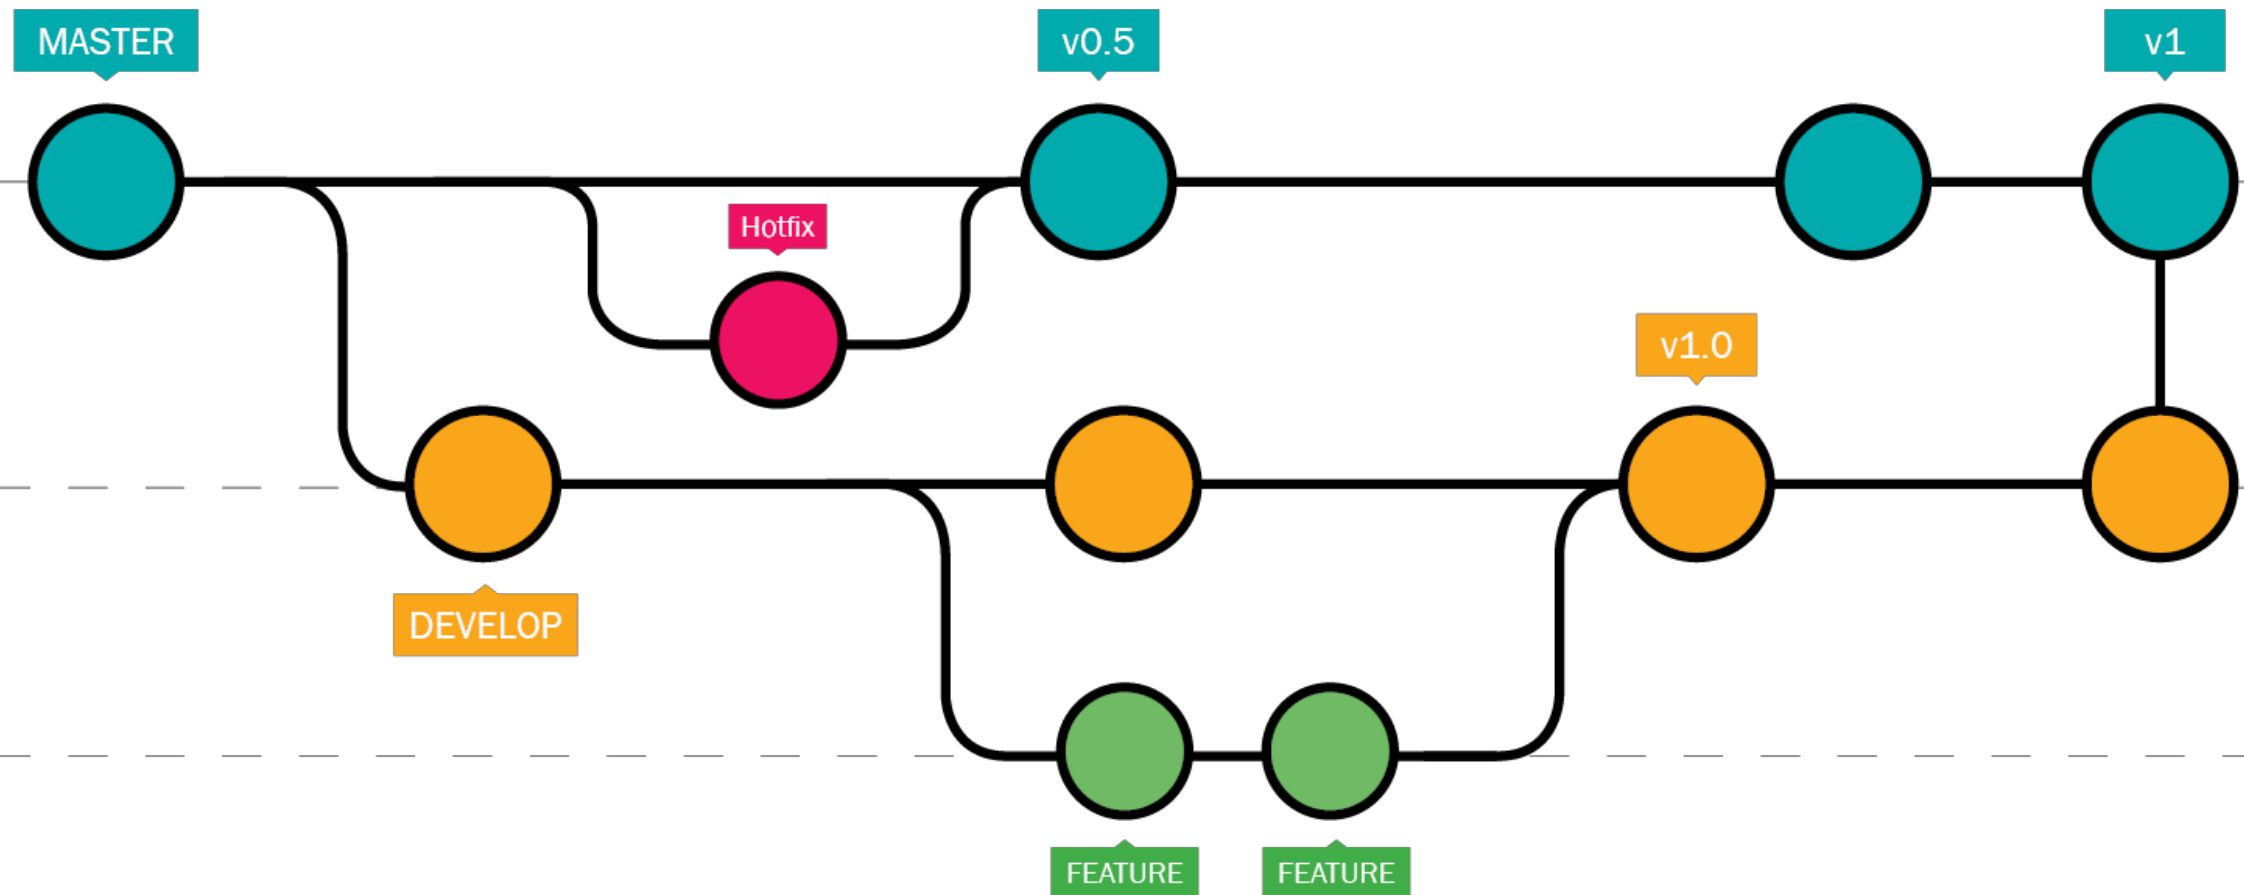

Git (Version Control System)

GitHub is not a **git**!

Git (Version Control System)

The core function of **git**: To save checkpoints (revisions) and share them with other people. Everything revolves around this concept.

Git (Version Control System)

Git commits conventions

	COMMENT	DATE
○	CREATED MAIN LOOP & TIMING CONTROL	14 HOURS AGO
○	ENABLED CONFIG FILE PARSING	9 HOURS AGO
○	MISC BUGFIXES	5 HOURS AGO
○	CODE ADDITIONS/EDITS	4 HOURS AGO
